## Version History

[illegible]

## 1. Introduction

This document outlines the business requirements for the **CardFlow Credit Origination Platform**, a multi-tenant SaaS solution designed to automate the credit card application and approval process. The document describes the objectives of the platform, the operational context in which it will be used, and the functional capabilities required to support credit application management.

The purpose of this document is to provide a clear understanding of the business needs and system expectations that guides the design, development, and implementation of the platform.

### 1.1. Purpose of the Document

This **Business Requirements Document (BRD)** defines the business and operational requirements for the **CardFlow Credit Origination Platform**.

This document establishes the scope, functional expectations, and business rules governing the platform's core processes, including credit application submission, review and approval workflows, amendment requests, and reinstatement processing.

This document aims to:

- Provide a structured definition of business requirements.
- Align stakeholders on functional scope and operational expectations.
- Serve as the foundation for subsequent system, functional, and technical design documentation.
- Support traceability across design, development, testing, and validation activities.

### 1.2. Product Overview

The **CardFlow Credit Origination Platform** enables financial institutions to standardize and digitize their credit card application lifecycle processes through a configurable, role-based workflow engine.

The platform supports:

- Applicant-initiated credit application submission
- Multi-level risk and compliance review
- Configurable approval routing
- Document management and audit logging

- Credit amendment and reinstatement processes
- Administrative configuration of approval matrices and requirement lists

The platform is delivered as a multi-tenant SaaS solution, enabling tenant organizations to configure approval logic, role hierarchies, and operational parameters independently while maintaining data isolation.

### 1.3. Definitions and Terminology

Table 1 Definitions and Terminology

| Term                | Definition                                                                                                |
|---------------------|-----------------------------------------------------------------------------------------------------------|
| Applicant           | An external customer applying for credit.                                                                 |
| Approval Matrix     | A configurable routing logic defining approval hierarchy and thresholds.                                  |
| Approval Workflow   | The sequence of review and approval steps required before a credit application receives a final decision. |
| Approver/ Reviewer  | An authorized tenant personnel responsible for evaluating applications.                                   |
| Audit Trail         | A record of actions and decisions performed within the system for monitoring and compliance purposes.     |
| Credit Origination  | The end-to-end process of accepting, reviewing, approving, or rejecting a credit card application.        |
| Reinstatement       | A process to restore credit privileges following suspension or rejection.                                 |
| Tenant Organization | A financial institution subscribed to the CardFlow platform.                                              |
| Tenant User         | A user who belongs to a tenant organization and is authorized to access and perform                       |

| Term | Definition                                                                     |
|------|--------------------------------------------------------------------------------|
|      | operational functions in the platform based on assigned roles and permissions. |

SCS

## 2. Business Context and Justification

This section describes the operational environment and business motivations behind the development of the **CardFlow Credit Origination Platform**. It outlines the current challenges associated with manual credit application processing, and explains how the proposed platform supports the automation and management of credit application workflows.

Understanding the business context provides stakeholders with insight into the problem being addressed and the expected benefits of implementing the platform.

### 2.1. Current Operational Challenges

Financial institutions managing credit card applications often rely on semi-manual processes, including email-based document exchanges, spreadsheet tracking, and manual approval routing. These practices introduce operational inefficiencies and control risks.

Common challenges include:

- Manual validation of submitted documents
- Delayed routing of applications across approval hierarchies
- Limited visibility into application status
- Inconsistent enforcement of approval thresholds
- Lack of centralized audit tracking
- Dependency on email-based communication
- Difficulty enforcing single active application rules

These processes increase turnaround time, elevate operational risk, and reduce transparency across credit review functions.

### 2.2. Business Objectives

The primary business objectives for implementing the **CardFlow Credit Origination Platform** include:

- Standardization of credit application workflows
- Reduction of manual intervention in routing and tracking
- Improved visibility into application lifecycle stages
- Centralized management of approval matrices
- Enforcement of business rules governing eligibility and submission

- Structured documentation and audit logging
- Support for configurable, tenant-specific approval hierarchies

By digitizing and automating the credit origination process, financial institutions can improve operational efficiency while maintaining governance and control.

### 2.3. Expected Business Impact

Implementation of the platform is expected to deliver measurable improvements across operational and governance functions, including:

- Reduced average credit application processing time
- Improved compliance traceability through structured audit logs
- Enhanced role-based access control and accountability
- Increased consistency in approval decision workflows
- Improved applicant experience through standardized submission processes

The platform supports scalable operational growth by enabling financial institutions to manage increasing application volumes without proportional increases in manual effort.

## 3. Scope Definition

This section defines the functional boundaries of the **CardFlow Credit Origination Platform**. It outlines the key operational capabilities included in the platform, and the areas that are explicitly excluded from the current scope of implementation.

### 3.1. In Scope

The **CardFlow Credit Origination Platform** supports the following functional areas within the credit card origination lifecycle:

- **Credit Application Submission**
  - Applicant registration and authentication
  - Creation of new credit card applications
  - Enforcement of one active application per applicant
  - Pre-population of available customer data
  - Upload of supporting documentation
  - Validation of required fields prior to submission
  - Submission locking upon finalization
- **Multi-Level Review and Approval Workflow**
  - Configurable approval matrix based on defined thresholds
  - Routing of applications to reviewers and approvers
  - Support for manual reassignment where necessary
  - Return-to-applicant functionality for incomplete submissions
  - Mandatory comment capture for approval, rejection, or return actions
  - Automatic notification triggers at defined workflow stages
- **Credit Amendment / Update Process**
  - Initiation of update requests for approved applications
  - Restriction of updates when other active applications exist
  - Approval routing consistent with configurable workflow rules
  - Locking of records post-submission
- **Credit Reinstatement Process**

- Initiation of reinstatement requests by authorized tenant users
- Workflow routing based on configured approval hierarchy
- Status tracking and notification upon decision
- **Document Management**
  - Support for predefined file formats (e.g., PDF, JPG, PNG)
  - Enforcement of file size limits
  - Storage of uploaded documents linked to application records
  - Manual validation of document contents by authorized reviewers
- **Reporting and Audit Capabilities**
  - Application listing and filtering by status, date, and role
  - Export capability for reporting purposes
  - Capture of approval history and decision logs
  - Audit trail visibility for administrative users
- **Administrative Configuration**
  - Configuration of approval matrices
  - Management of requirement lists
  - Role configuration and permission management
  - Access to audit logs
  - System-level configuration controls

## 3.2. Out of Scope

The following areas are explicitly excluded from the scope of this platform:

- Core banking ledger management
- Credit scoring algorithm design or external bureau computation logic
- Card manufacturing and issuance processes
- Payment processing and settlement systems
- Fraud detection engine implementation
- Direct integration with third-party ERP systems unless defined in a future phase

### 3.3. Future Considerations

The platform architecture allows extensibility to support:

- Integration with external credit bureau APIs
- Advanced risk scoring services
- Automated document verification services
- Expanded reporting analytics
- Regional compliance configuration

**Note:**

Future enhancements may be defined under separate requirement documentation.

## 4. Stakeholders and User Roles

This section discusses the primary stakeholders involved in the operation and use of the **CardFlow Credit Origination Platform**. These stakeholders represent the roles responsible for initiating:

- Credit applications
- Reviewing submitted information
- Approving or rejecting applications
- Managing system configuration and oversight

Understanding the responsibilities of each stakeholder group ensures the platform supports the operational workflows, approval hierarchies, and governance requirements associated with credit application processing.

### 4.1. Tenant Organizations

**Tenant Organizations** are financial institutions subscribed to the **CardFlow Credit Origination Platform**. Each tenant operates in its own isolated environment and configures approval workflows, role assignments, and operational rules according to its internal credit governance policies.

**Tenant Users** are responsible for managing the credit application lifecycle in their organization, including submission, review, approval, and administrative configuration activities.

### 4.2. Platform Operations

**Platform Operations** represent the service provider responsible for maintaining the **CardFlow Credit Origination Platform**. This group ensures the availability, reliability, and security of the platform and may perform system-level configuration, monitoring, and maintenance activities.

Platform Operations do not participate in the credit decision process but provide the infrastructure and operational support required for Tenant Organizations to use the platform effectively.

### 4.3. User Role Definitions

The platform supports multiple user roles aligned with the operational stages of the credit origination workflow. Each role is granted permissions appropriate to its responsibilities in the credit review and approval process.

Typical roles supported by the platform include:

Table 2 User Role Definitions

| Term                   | Definition                                                                                                                                   |
|------------------------|----------------------------------------------------------------------------------------------------------------------------------------------|
| Applicant              | External customer submitting a credit card application and required supporting documentation.                                                |
| Sales Officer          | Tenant User responsible for assisting applicants and initiating credit application submissions.                                              |
| Risk Reviewer          | Tenant user responsible for reviewing application details and assessing credit risk before approval decisions.                               |
| Compliance Reviewer    | Tenant user responsible for verifying regulatory and documentation requirements prior to approval.                                           |
| Approver               | Authorized personnel responsible for approving or rejecting applications based on defined approval thresholds.                               |
| Platform Administrator | Tenant User responsible for managing configuration settings, approval matrices, user roles, and system parameters in the tenant environment. |

## 5. High-Level Business Process Overview

The **CardFlow Credit Origination Platform** supports a structured workflow that manages the lifecycle of credit card applications from submission to final decision. The platform provides a centralized environment where applicants, reviewers, and approvers interact through defined workflow stages governed by configurable business rules and approval hierarchies.

Operational workflows in the platform follow a consistent lifecycle pattern that includes request initiation, information submission, validation, review, routing, and outcome determination. The following workflows illustrate how the platform manages different credit-related processes.

### 5.1. Credit Application Workflow

The **Credit Application Workflow** represents the primary process in the platform, enabling applicants to submit credit card applications and supporting documentation for review and approval.

The process typically follows these stages:

1. **Application Initiation** – A new credit application is initiated by an authorized tenant user within the platform.
2. **Information Submission** – The applicant provides the required information and uploads supporting documentation necessary for the credit application.
3. **Validation** – The platform validates the completeness of required fields and verifies that submission rules are satisfied prior to further processing.
4. **Review** – Authorized reviewers assess the submitted information and supporting documentation in accordance with the tenant organization's credit and compliance policies.
5. **Routing** – The application is routed through the configured approval workflow to designated approvers based on approval thresholds and hierarchy rules.
6. **Outcome** – The application is approved, rejected, or returned for additional information based on the review and approval decision.

The platform maintains a complete audit trail of all actions performed during the application lifecycle.

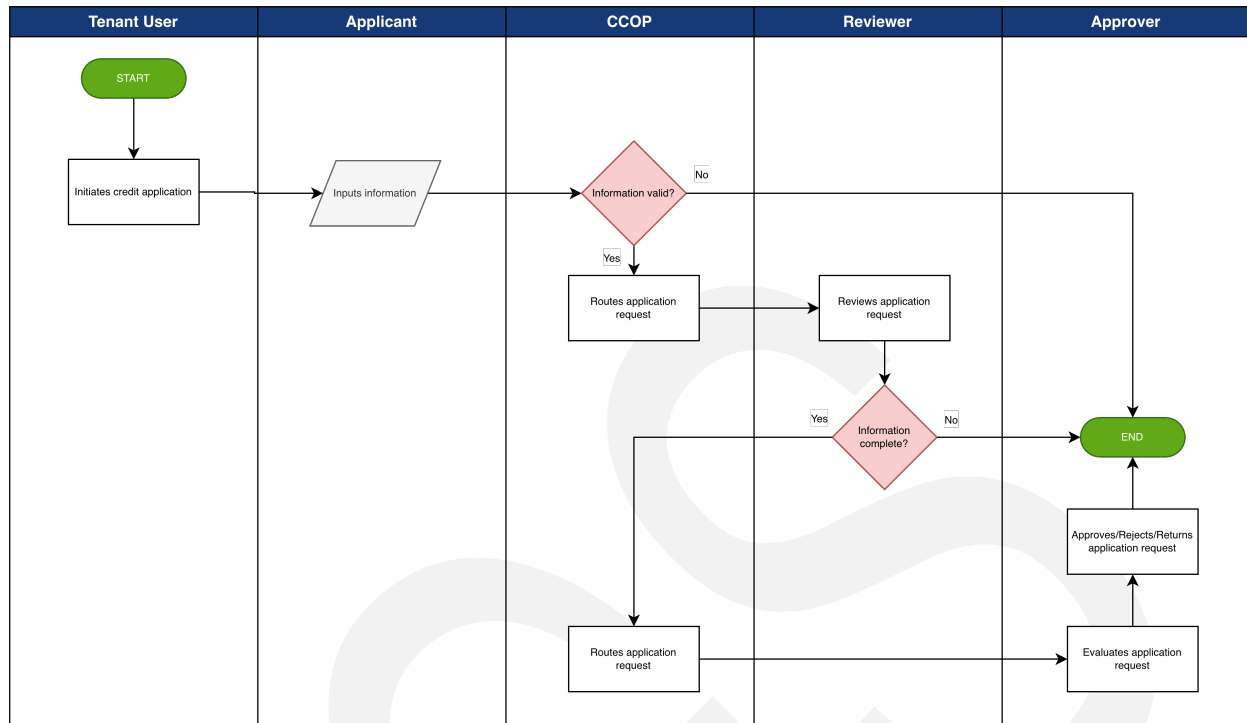

Figure 1 Credit Application Workflow

## 5.2. Credit Amendment / Update Workflow

The **Credit Amendment Workflow** allows authorized tenant users to initiate requests to modify or update previously approved credit application information.

This process supports operational scenarios where updates to customer information, credit limits, or supporting documentation are required after the initial approval:

1. **Amendment Request Initiation** – A change or update request is initiated by an authorized tenant user to modify an existing credit application or credit account information.
2. **Validation** – The system validates the eligibility conditions for the amendment, including verification of required fields and applicable business rules.
3. **Information Submission** – Updated information or supporting documentation is provided to support the requested amendment.
4. **Routing** – The amendment request is routed through the configured approval workflow to the appropriate authorized approvers.
5. **Outcome** – The amendment request is either approved or rejected based on the review outcome.

This workflow ensures all updates to approved credit records undergo appropriate review and authorization.

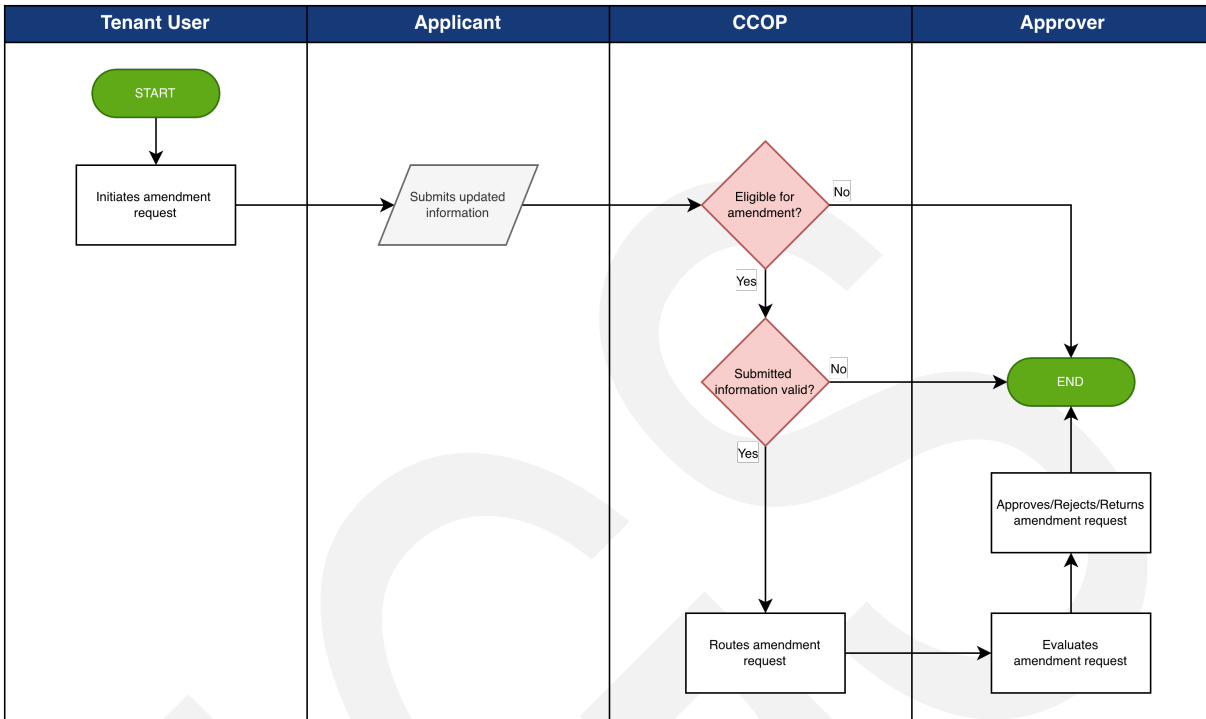

Figure 2 Credit Amendment/Update Workflow

### 5.3. Credit Reinstatement Workflow

The **Credit Reinstatement Workflow** enables tenant organizations to process requests to reinstate credit privileges that were previously suspended, rejected, or inactive.

This process allows authorized users to submit reinstatement requests that are evaluated through the defined approval hierarchy:

1. **Reinstatement Request Initiation** – A reinstatement request is submitted by an authorized tenant user for a previously suspended or inactive credit account.
2. **Validation** – The system validates eligibility conditions for reinstatement, including completeness of required information and supporting documentation.
3. **Information Submission** – Supporting documents and any required updated information are provided to support the reinstatement request.
4. **Routing** – The reinstatement request is routed through the configured approval workflow to authorized reviewers.

5. **Outcome** – The reinstatement request is either approved or rejected based on the review outcome.

The platform records all reinstatement activities to maintain transparency and auditability of credit decision processes.

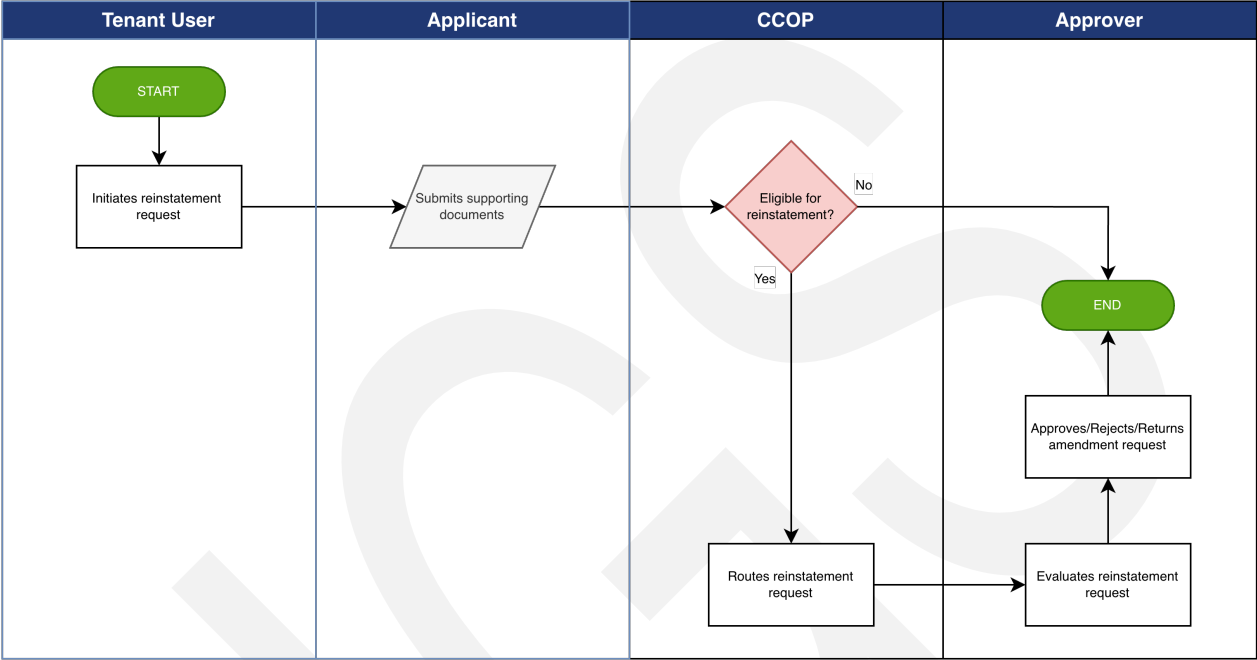

Figure 3 Credit Reinstatement Workflow

## 6. Business Requirements

This section defines the business requirements for the **CardFlow Credit Origination Platform**. The requirements describe the expected system capabilities and operational behaviors necessary to support the credit card application lifecycle within tenant organizations.

The requirements are organized into functional areas aligned with the key operational processes introduced in the **High-Level Business Process Overview** section. Each functional area represents a group of related capabilities that support specific stages of the credit origination workflow, including application submission, document management, review and approval routing, and administrative configuration.

These requirements establish the functional expectations of the platform and provide the foundation for subsequent system design, development, and testing activities.

### 6.1. Authentication and Access Control

This subsection defines the requirements governing how users access the **CardFlow Credit Origination Platform** and how permissions are managed within the system:

- **Authentication Mechanisms** ensure that only authorized users can access the platform
- **Access Control** rules determine the actions each user role is permitted to perform within the credit origination workflow.

The platform supports secure authentication for both external applicants and internal tenant users, while enforcing role-based access control to protect sensitive financial and personal information associated with credit applications.

Table 3 Authentication and Access Control

| No.       | Business Requirement       | Definition                                                                                                                                                                     |
|-----------|----------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| BR-6.1-01 | Applicant Access           | The system shall allow applicants to access the platform using registered credentials to initiate and manage credit card applications.                                         |
| BR-6.1-02 | Tenant User Authentication | The system shall allow tenant users to securely authenticate in order to access operational functions associated with credit application review, approval, and administration. |

| No.       | Business Requirement                      | Definition                                                                                                                                            |
|-----------|-------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------|
| BR-6.1-03 | Role-Based Access Control                 | The system shall enforce role-based access control to ensure that users can only perform actions permitted by their assigned role.                    |
| BR-6.1-04 | Session Management                        | The system shall maintain authenticated user sessions and automatically terminate inactive sessions after a defined period of inactivity.             |
| BR-6.1-05 | Access Restriction for Unauthorized Users | The system shall prevent unauthorized users from accessing application data, administrative functions, or workflow activities.                        |
| BR-6.1-06 | Administrative User Management            | The system shall allow authorized administrators to manage user accounts, assign roles, and configure user permissions within the tenant environment. |

## 6.2. Credit Application Submission

This subsection defines the requirements governing the creation and submission of credit card applications in the **CardFlow Credit Origination Platform**. The platform supports the following processes:

- Collection of applicant information
- Submission of supporting documentation
- Enforcement of submission rules before an application is routed for review

These requirements ensure that applications are submitted with complete and valid information while maintaining consistency and traceability throughout the credit origination process.

Table 4 Credit Application Submission

| No.       | Business Requirement           | Definition                                                                                                                                                     |
|-----------|--------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| BR-6.2-01 | Application Creation           | The system shall allow authorized users to create a new credit card application in the platform.                                                               |
| BR-6.2-02 | Single Active Application Rule | The system shall enforce a rule that prevents the creation of multiple active credit applications for the same applicant.                                      |
| BR-6.2-03 | Required Information Capture   | The system shall require applicants to provide mandatory information necessary to evaluate the credit application prior to submission.                         |
| BR-6.2-04 | Supporting Document Upload     | The system shall allow applicants to upload supporting documents required for credit evaluation.                                                               |
| BR-6.2-05 | Accepted File Formats          | The system shall support predefined file formats for uploaded documents.                                                                                       |
| BR-6.2-06 | File Size Limitation           | The system shall enforce file size limits for uploaded documents to ensure system performance and storage efficiency.                                          |
| BR-6.2-07 | Application Validation         | The system shall validate that all required information and documentation have been provided before an application can be submitted for review.                |
| BR-6.2-08 | Application Submission         | The system shall allow applicants or authorized tenant users to submit completed applications for review.                                                      |
| BR-6.2-09 | Submission Locking             | The system shall prevent modification of an application once it has been submitted for review, unless it is returned for correction by an authorized reviewer. |

| No.       | Business Requirement        | Definition                                                                                                                                   |
|-----------|-----------------------------|----------------------------------------------------------------------------------------------------------------------------------------------|
| BR-6.2-10 | Application Status Tracking | The system shall assign and maintain a status indicator to track the progress of the application throughout the review and approval process. |

### 6.3. Document Management

This subsection defines the requirements related to the handling, storage, and management of supporting documents associated with credit applications. Supporting documentation is a critical component of the credit evaluation process, as reviewers and approvers rely on submitted documents to verify applicant information and assess credit eligibility.

The platform provides mechanisms that securely store submitted documents, associate them with the appropriate application records, and allow authorized users to review these documents during the evaluation process.

Table 5 Document Management

| No.       | Business Requirement                 | Definition                                                                                                                         |
|-----------|--------------------------------------|------------------------------------------------------------------------------------------------------------------------------------|
| BR-6.3-01 | Document Attachment to Application   | The system shall associate uploaded documents with the corresponding credit application record.                                    |
| BR-6.3-02 | Document Accessibility for Reviewers | The system shall allow authorized tenant users to access and review documents submitted as part of a credit application.           |
| BR-6.3-03 | Document Type Identification         | The system shall allow uploaded documents to be categorized according to predefined document types required for credit evaluation. |
| BR-6.3-04 | Document Integrity Preservation      | The system shall store uploaded documents without altering their original content.                                                 |

| No.       | Business Requirement             | Definition                                                                                                                                          |
|-----------|----------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------|
| BR-6.3-05 | Document Validation by Reviewers | The system shall allow authorized reviewers to validate the completeness and relevance of submitted documents as part of the credit review process. |
| BR-6.3-06 | Document Retention               | The system shall retain documents associated with credit applications for reference and audit purposes.                                             |

#### 6.4. Risk Review and Approval Workflow

This subsection defines the requirements governing the review and approval of credit card applications within the **CardFlow Credit Origination Platform**. After an application has been submitted, it undergoes a structured evaluation process to verify the completeness of submitted information, assess credit eligibility, and ensure compliance with the tenant organization's credit policies.

The platform supports configurable approval workflows that route applications to appropriate reviewers and approvers based on predefined approval matrices and role hierarchies. These workflows ensure that credit decisions are reviewed and authorized according to the organization's governance requirements while maintaining transparency and auditability throughout the decision process.

Table 6 Risk Review and Approval Workflow

| No.       | Business Requirement          | Definition                                                                                                                    |
|-----------|-------------------------------|-------------------------------------------------------------------------------------------------------------------------------|
| BR-6.4-01 | Application Review Access     | The system shall allow authorized reviewers to access submitted credit applications for evaluation.                           |
| BR-6.4-02 | Document and Data Review      | The system shall allow reviewers to examine submitted application data and supporting documentation before making a decision. |
| BR-6.4-03 | Configurable Approval Routing | The system shall route applications through a configurable approval workflow based on predefined approval matrices.           |

| No.       | Business Requirement             | Definition                                                                                                                               |
|-----------|----------------------------------|------------------------------------------------------------------------------------------------------------------------------------------|
| BR-6.4-04 | Approval Decision Recording      | The system shall allow authorized approvers to record approval or rejection decisions for submitted applications.                        |
| BR-6.4-05 | Return for Correction            | The system shall allow reviewers or approvers to return an application to the applicant or initiating user for correction or completion. |
| BR-6.4-06 | Mandatory Decision Comments      | The system shall require users performing approval, rejection, or return actions to provide comments explaining the decision.            |
| BR-6.4-07 | Application Status Updates       | The system shall update application status automatically as it progresses through the review and approval workflow.                      |
| BR-6.4-08 | Approval History Tracking        | The system shall record all review and approval actions associated with an application to maintain a complete audit trail.               |
| BR-6.4-09 | Notification of Workflow Actions | The system shall notify relevant users when an application requires review, approval, or additional information.                         |

## 6.5. Credit Amendment Processes

This subsection defines the requirements governing the amendment or update of previously submitted or approved credit applications. Operational scenarios may arise where information associated with an application must be corrected, updated, or revised after the initial submission or approval.

The platform supports a controlled amendment process that allows authorized tenant users to submit update requests while ensuring that such changes undergo appropriate review and authorization. This process ensures that modifications to credit records are tracked, validated, and approved in accordance with the organization's credit governance policies.

Table 7 Credit Amendment Processes

| No.       | Business Requirement              | Definition                                                                                                                                |
|-----------|-----------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------|
| BR-6.5-01 | Amendment Request Initiation      | The system shall allow authorized tenant users to initiate a credit amendment request for an existing application record.                 |
| BR-6.5-02 | Amendment Eligibility Validation  | The system shall validate whether the application is eligible for amendment based on defined business rules.                              |
| BR-6.5-03 | Submission of Updated Information | The system shall allow users to provide updated information or documentation as part of the amendment request.                            |
| BR-6.5-04 | Amendment Workflow Routing        | The system shall route amendment requests through the configured approval workflow based on the tenant organization's approval hierarchy. |
| BR-6.5-05 | Amendment Approval Decision       | The system shall allow authorized approvers to approve or reject amendment requests.                                                      |
| BR-6.5-06 | Amendment Status Tracking         | The system shall maintain a status indicator reflecting the progress of the amendment request throughout the review process.              |
| BR-6.5-07 | Amendment History Recording       | The system shall record amendment actions and decisions associated with an application to maintain a complete audit history.              |

## 6.6. Credit Reinstatement Processes

This subsection defines the requirements governing the reinstatement of credit privileges within the **CardFlow Credit Origination Platform**. In certain operational scenarios, previously suspended, rejected, or inactive credit applications may require reassessment to determine whether credit privileges can be restored.

The platform supports a reinstatement workflow that allows authorized tenant users to submit reinstatement requests and route them through the appropriate review and approval hierarchy. This process ensures that reinstatement decisions are evaluated according to the organization's credit governance policies while maintaining traceability of all actions performed.

Table 8 Credit Reinstatement Processes

| No.       | Business Requirement                 | Definition                                                                                                                                              |
|-----------|--------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|
| BR-6.6-01 | Reinstatement Request Initiation     | The system shall allow authorized tenant users to initiate a credit reinstatement request for an existing application or credit record.                 |
| BR-6.6-02 | Reinstatement Eligibility Validation | The system shall validate whether the application or credit record is eligible for reinstatement based on defined business rules.                       |
| BR-6.6-03 | Supporting Documentation Submission  | The system shall allow users to provide supporting information or documentation required to evaluate the reinstatement request.                         |
| BR-6.6-04 | Reinstatement Workflow Routing       | The system shall route reinstatement requests through the configured approval workflow in accordance with the tenant organization's approval hierarchy. |
| BR-6.6-05 | Reinstatement Decision Recording     | The system shall allow authorized approvers to approve or reject reinstatement requests.                                                                |
| BR-6.6-06 | Reinstatement Status Tracking        | The system shall maintain a status indicator reflecting the progress of the reinstatement request throughout the evaluation process.                    |
| BR-6.6-07 | Reinstatement Audit Logging          | The system shall record all reinstatement actions and decisions to maintain an audit trail of the reinstatement process.                                |

## 6.7. Reporting and Audit Capabilities

This subsection defines the requirements for reporting and audit-related capabilities in the **CardFlow Credit Origination Platform**:

- **Reporting** functions allow tenant users to monitor application activity, review application status, and generate operational reports to support credit management activities.
- **Audit** capabilities ensure that all actions performed within the platform are recorded and traceable. Maintaining a complete audit trail supports operational transparency, internal governance, and regulatory compliance requirements associated with credit decision processes.

Table 9 Reporting and Audit Capabilities

| No.       | Business Requirement        | Definition                                                                                                                                                     |
|-----------|-----------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| BR-6.7-01 | Application Listing         | The system shall provide a listing of credit applications accessible to authorized tenant users.                                                               |
| BR-6.7-02 | Application Filtering       | The system shall allow users to filter application records based on predefined criteria such as application status, submission date, or applicant information. |
| BR-6.7-03 | Application Detail Viewing  | The system shall allow authorized users to view detailed information associated with individual credit applications.                                           |
| BR-6.7-04 | Report Export Capability    | The system shall allow users to export application data for reporting and analysis purposes.                                                                   |
| BR-6.7-05 | Approval History Visibility | The system shall display the history of review and approval actions associated with each application.                                                          |
| BR-6.7-06 | Audit Log Recording         | The system shall record user activities and workflow actions performed within the platform.                                                                    |

| No.       | Business Requirement    | Definition                                                                                                             |
|-----------|-------------------------|------------------------------------------------------------------------------------------------------------------------|
| BR-6.7-07 | Audit Log Accessibility | The system shall allow authorized administrative users to access audit logs for monitoring and investigation purposes. |

## 6.8. Administrative Configuration

This subsection defines the requirements governing the administrative configuration capabilities of the **CardFlow Credit Origination Platform**. Administrative users must be able to manage system configuration settings that support the operational workflows of the platform, including approval routing structures, role assignments, and system-level parameters.

Administrative configuration capabilities allow tenant organizations to adapt the platform to their internal governance structures, and operational policies while maintaining control over access permissions and approval hierarchies.

Table 10 Administrative Configuration

| No.       | Business Requirement            | Definition                                                                                                                                                                 |
|-----------|---------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| BR-6.8-01 | Approval Matrix Configuration   | The system shall allow authorized administrative users to configure approval matrices that determine the routing of applications through the review and approval workflow. |
| BR-6.8-02 | Role Configuration              | The system shall allow administrative users to assign and manage user roles within the tenant organization.                                                                |
| BR-6.8-03 | Permission Management           | The system shall enforce permissions associated with user roles to control access to system functions and data.                                                            |
| BR-6.8-04 | Requirements List Configuration | The system shall allow administrative users to configure the list of required documents or information needed for credit application submissions.                          |

| No.       | Business Requirement            | Definition                                                                                                                      |
|-----------|---------------------------------|---------------------------------------------------------------------------------------------------------------------------------|
| BR-6.8-05 | System Parameter Configuration  | The system shall allow administrative users to configure system parameters that influence operational behavior of the platform. |
| BR-6.8-06 | Administrative Audit Visibility | The system shall allow administrative users to review system activity logs and configuration changes.                           |

## 7. Regulatory and Compliance Considerations

Financial institutions operate within regulated environments where credit decisions, customer information, and financial records must be handled in accordance with applicable regulatory and governance requirements. The **CardFlow Credit Origination Platform** must therefore support operational controls that enable tenant organizations to maintain compliance with relevant financial regulations, internal policies, and data protection standards.

The platform provides mechanisms that promote transparency, traceability, and responsible handling of sensitive customer information throughout the credit application lifecycle.

The following subsections outline key regulatory and compliance considerations relevant to the platform's operation.

### 7.1. Data Protection and Privacy

This subsection outlines considerations related to the protection, access control, and secure handling of applicant data processed within the platform.

- The platform supports the responsible handling of applicant information and sensitive financial data in accordance with applicable data protection requirements.  
Access to customer data is restricted to authorized users, and the platform enforces role-based access controls to prevent unauthorized access to personal or financial information.
- The platform maintains secure storage of documents and information submitted as part of credit applications, ensuring that sensitive data is accessible only to users with appropriate permissions.

### 7.2. Financial Regulatory Requirements

This subsection describes how the platform supports transparency and traceability of actions performed throughout the credit application lifecycle.

- Credit approval decisions require transparency and traceability to support internal governance and regulatory oversight.  
The platform maintains a record of actions performed throughout the credit application lifecycle, including application submission, review actions, approval decisions, and administrative configuration changes.
- These records allow tenant organizations to review historical activity and support audit investigations when necessary.

### 7.3. KYC/AML Integration Considerations

This subsection highlights how the platform supports tenant organizations in performing customer verification activities that may be required as part of credit evaluation processes.

- Financial institutions may require verification of customer identity and supporting documentation as part of the credit application evaluation process.

The platform supports the submission and review of documentation that may be used to assist tenant organizations in performing Know Your Customer (KYC) and Anti-Money Laundering (AML) verification activities.

- Tenant organizations may incorporate these verification activities into their internal credit review workflows as required by their operational policies.

### 7.4. Data Retention

This subsection discusses considerations related to the storage and retention of application records, documents, and system activity logs for governance and audit purposes.

- The platform maintains records of submitted applications, supporting documents, and audit logs for reference and compliance purposes.

Retained records allow tenant organizations to review historical application activity and maintain documentation required for audit and regulatory review.

- Retention policies may be defined according to the tenant organization's internal governance policies and applicable regulatory requirements.

## 8. Success Criteria and KPIs

This section defines the key indicators used to measure the effectiveness and operational impact of the **CardFlow Credit Origination Platform** after implementation. These indicators help evaluate whether the platform achieves its objective of improving efficiency, reducing manual intervention, and enhancing visibility across the credit application process.

The success of the platform is assessed through measurable improvements in application processing efficiency, workflow transparency, and operational control.

### 8.1. Application Processing Efficiency

The platform improves the efficiency of the credit application process by reducing the time required to submit, review, and approve credit applications.

Example indicators may include:

- Reduction in average application processing time
- Increased number of applications processed within a given period
- Reduced manual effort required to manage application submissions

### 8.2. Workflow Visibility and Traceability

The platform provides improved visibility into the status and progression of credit applications across the approval workflow.

Example indicators may include:

- Ability to track application status in real time
- Availability of approval history for submitted applications
- Improved monitoring of pending or delayed applications

### 8.3. Operational Efficiency

The platform enhances operational efficiency by automating manual tasks associated with credit application handling and approval coordination.

Example indicators may include:

- Reduction in manual document handling
- Reduced dependency on email-based approvals
- Improved coordination between reviewers and approvers

## 8.4. Reporting and Monitoring Capability

The platform enables tenant organizations to generate operational reports and monitor system activity to support management oversight and decision-making.

Example indicators may include:

- Availability of exportable application reports
- Access to audit logs for monitoring system activities
- Improved ability to review application trends and operational performance

## 9. Assumptions, Risk, and Dependencies

This section outlines key assumptions, potential risks, and external dependencies that may influence the successful implementation and operation of the **CardFlow Credit Origination Platform**. Identifying these factors helps ensure that stakeholders maintain awareness of conditions that could impact project delivery, system adoption, and operational effectiveness.

The following subsections describe considerations related to project assumptions, potential risks, and external dependencies.

### 9.1. Assumptions

This subsection describes conditions assumed to be true for the successful development and operation of the platform.

Examples of assumptions include:

- Tenant organizations provide the necessary credit policies and approval structures required to configure the platform workflows.
- Users responsible for reviewing and approving credit applications have appropriate training to operate the platform.
- Supporting infrastructure required for the deployment and operation of the platform is available and maintained by the responsible parties

### 9.2. Risks

This subsection outlines potential factors that could negatively affect the implementation, adoption, or operation of the platform.

Examples of risks include:

- Delays in defining or configuring approval workflows may impact the readiness of the system for operational use.
- Incomplete or inconsistent applicant information may lead to delays in the credit evaluation process.
- Changes in regulatory or organizational policies may require adjustments to platform configuration or workflows.

### 9.3. Dependencies

This subsection identifies external systems, organizational inputs, or operational factors that the platform depends on to function effectively.

Examples of dependencies include:

- Availability of user access management and identity authentication services.
- Integration with systems that may provide supporting customer or credit-related information.
- Timely configuration and maintenance of approval matrices and operational policies by tenant administrators.
