Version History

[illegible]

1. Introduction

This document presents the **User Stories** and **Acceptance Criteria** for the **CardFlow Credit Origination Platform**. It translates the defined business and functional requirements into user-centric scenarios that describe how different users interact with the system to achieve specific outcomes.

User stories are organized based on the system's core workflows and lifecycle stages, ensuring alignment with the Functional Design Document (FDD). Each user story is accompanied by acceptance criteria that define the conditions required for successful implementation and validation.

1.1. Purpose of the Document

The purpose of this document is to define user-centered functional requirements in the form of user stories and acceptance criteria, supporting development, testing, and validation activities.

1.2. Scope of User Stories

This document covers user stories related to the core workflows of the **CardFlow Credit Origination Platform**, including credit application, amendment, and reinstatement processes, as well as associated validation, review, and approval activities.

1.3. Intended Audience

This document is intended for stakeholders involved in the design, development, testing, and review of the system, including:

- Business Analysts
- Developers
- Quality Assurance Engineers
- Product Owners
- Technical Writers

1.4. Relationship to BRD, SRS, and FDD

This document is derived from and aligned with the following documents:

- **Business Requirements Document (BRD)** – Defines the business objectives and requirements
- **Software Requirements Specification (SRS)** – Defines the system requirements
- **Functional Design Document (FDD)** – Defines system behavior and workflows

User stories provide a bridge between these documents and implementation by expressing requirements from the user's perspective.

1.5. Document Structure

This document is organized by functional workflows, with user stories grouped according to lifecycle stages and system processes. Each section includes user stories and their corresponding acceptance criteria, providing a structured view of expected system behavior.

1.6. Related Documents

A **Requirements Traceability Matrix (RTM)** is maintained as a separate artifact to provide end-to-end mapping across project documents.

2. Approach and Structure

This section describes the format, organization, and approach used in defining user stories and acceptance criteria within this document.

2.1. User Story Format

User stories are defined using a standard format to clearly express user needs and intended outcomes:

As a [user role], I want to [perform an action], so that [achieve a goal].

This format ensures that each requirement is presented from the user's perspective and highlights the value delivered by the system.

2.2. Acceptance Criteria Definition

Acceptance Criteria defines the conditions that must be satisfied for a user story to be considered complete and acceptable.

Acceptance Criteria are presented as a list of verifiable conditions that:

- Describe expected system behavior
- Define success conditions for the user story
- Support testing and validation activities

2.3. Mapping to Functional Workflows

User stories are grouped according to the system's core functional workflows:

- Credit Application
- Credit Amendment
- Credit Reinstatement

Within each workflow, user stories are further organized by lifecycle stage to reflect the sequence of user interactions and system behavior.

2.4. Mapping to Workflow Lifecycle

User stories are aligned with the standard workflow lifecycle defined in the Functional Design Document, including:

- Initiation

- Information Submission
- Validation
- Review
- Routing
- Outcome

This alignment ensures consistency between user actions and system processing stages.

3. Workflow-Based User Stories Overview

This section provides an overview of how user stories are structured and aligned with the system's workflow lifecycle and user roles.

3.1. Standard Workflow Lifecycle Alignment

User stories are aligned with the standard workflow lifecycle defined in the Functional Design Document. This ensures that all user interactions are mapped to specific stages of system processing.

The lifecycle stages covered in this document include:

- Initiation
- Information Submission
- Validation
- Review
- Routing
- Outcome

Each user story corresponds to a specific stage in the lifecycle, reflecting the sequence of actions performed by users and the system.

3.2. User Roles Covered

User stories in this document are defined across the following user roles to reflect role-based interactions within the system:

- **Applicant** – Initiates requests, provides information, and submits applications
- **Tenant User** – Facilitates request initiation on behalf of applicants
- **Reviewer** – Evaluates submitted information and determines completeness
- **Approver** – Makes approval decisions based on defined rules and policies
- **System (CCOP)** – Performs validation, routing, and processing actions

This role-based structure ensures that user responsibilities and system behavior are clearly represented within each workflow.

4. Credit Application User Stories

This section defines the user stories and acceptance criteria for the Credit Application workflow. The user stories are aligned with the standard workflow lifecycle and describe how users and the system interact during the processing of credit applications.

4.1. Epic Overview

The Credit Application workflow represents the primary process of the system, covering the end-to-end lifecycle from application initiation to outcome.

This epic includes user interactions and system behaviors related to:

- Initiation of credit applications
- Submission of required information and documents
- Validation of submitted data
- Review and evaluation of applications
- Routing to appropriate approvers
- Final decision outcomes

4.2. User Stories and Acceptance Criteria

This subsection defines the user stories and acceptance criteria for the Credit Application workflow.

4.2.1. Credit Application Initiation

This subsection defines user stories for initiating a credit application.

Table 1 Credit Application Initiation

ID	User Story	Acceptance Criteria
US-APP-01	As an Applicant, I want to initiate a credit application so that I can start the application process.	• The system allows creation of a new application. • The application is created in Draft state. • The user can access and edit the application.

ID	User Story	Acceptance Criteria
US-APP-02	As a Tenant User, I want to initiate a credit application on behalf of an applicant so that I can facilitate application creation.	- The system allows creation of application on behalf of another user. - The application is saved in Draft state. - The Tenant User can input applicant details.

4.2.2. Information Submission

This subsection describes user stories related to the submission of application information and documents.

Table 2 Credit Application Information Submission

ID	User Story	Acceptance Criteria
US-APP-03	As an Applicant, I want to provide required information and upload supporting documents so that my application can be processed.	- The system allows entry of required fields. - The system allows document upload. - Uploaded documents are associated with the application.
US-APP-04	As an Applicant, I want to submit my application so that it can proceed for validation and review.	- All mandatory fields are completed before submission. - Required documents are uploaded. - The application transitions to Submitted state.

4.2.3. Validation

This subsection describes user stories related to the validation of submitted application data.

Table 3 Credit Application Validation

ID	User Story	Acceptance Criteria
US-APP-05	As the System, I want to validate submitted application data so that only complete and valid applications proceed.	- Mandatory fields are validated. - Document presence is verified. - File format and size are validated. - Valid applications proceed to Review stage.
US-APP-06	As the System, I want to return invalid applications to the user so that corrections can be made.	- Invalid applications are moved to Returned state. - Validation messages are displayed. - The user can update and resubmit the application.

4.2.4. Review

This subsection describes user stories related to the review of submitted applications

Table 4 Credit Application Review

ID	User Story	Acceptance Criteria
US-APP-07	As a Reviewer, I want to review submitted applications so that I can assess their completeness and accuracy.	- Reviewer can access assigned applications. - Reviewer can view application data and documents. - Reviewer can proceed or return the application.
US-APP-08	As a Reviewer, I want to return applications for correction so that missing or incorrect information can be addressed.	- Reviewer can access assigned applications. - Reviewer can view application data and documents.

ID	User Story	Acceptance Criteria
		Reviewer can proceed or return the application.

4.2.5. Routing

This subsection describes user stories related to the routing of credit applications for approval.

Table 5 Credit Application Routing

ID	User Story	Acceptance Criteria
US-APP-09	As the System, I want to route applications to appropriate approvers so that approval decisions can be made.	- Applications are routed based on configured workflow rules. - Approvers are assigned based on roles or hierarchy. - Application transitions to Pending Approval state.

4.2.6. Outcome

This subsection describes user stories related to approval decisions and final outcomes.

Table 6 Credit Application Outcome

ID	User Story	Acceptance Criteria
US-APP-10	As an Approver, I want to approve applications so that valid applications are accepted.	- Approver can approve the application. - Application transitions to Approved state. - Approval is recorded in audit logs.
US-APP-11	As an Approver, I want to reject applications so that invalid applications are not processed further.	- Approver can reject the application. - No further processing occurs.

ID	User Story	Acceptance Criteria
		• Approval is recorded in audit logs.
US-APP-12	As an Approver, I want to return applications for correction so that issues can be addressed before approval.	• Approver can return application with comments. • Application transitions to Returned state. • User can update and resubmit.

5. Credit Amendment User Stories

This section defines the user stories and acceptance criteria for the Credit Amendment workflow, describing how users and the system interact when modifying existing credit applications or account information.

5.1. Epic Overview

The Credit Amendment workflow enables controlled updates to existing records, ensuring that all changes are validated, reviewed, and approved before being applied.

This epic includes:

- Initiation of amendment requests
- Eligibility validation for modification
- Submission of updated information and documents
- Validation of submitted updates
- Review and approval of amendment requests
- Application of approved changes

5.2. User Stories and Acceptance Criteria

This subsection defines the user stories and acceptance criteria for the Credit Amendment workflow.

5.2.1. Credit Amendment Request Initiation

This subsection defines user stories for initiating a credit amendment request.

Table 7 Credit Amendment Request Initiation

ID	User Story	Acceptance Criteria
US-AMD-01	As a Tenant User, I want to initiate an amendment request so that I can modify an existing application or account.	• The system allows selection of an existing record. • The system allows creation of an amendment request. • The request is created in Draft state.

5.2.2. Eligibility Validation

This subsection describes user stories related to eligibility validation for amendment requests.

Table 8 Credit Amendment Request Eligibility Validation

ID	User Story	Acceptance Criteria
US-AMD-02	As the System, I want to validate whether a record is eligible for amendment so that only valid records can be modified.	• The system checks eligibility based on defined rules. • Eligible records proceed to submission. • Ineligible requests are rejected.

5.2.3. Information Submission

This subsection describes user stories related to the submission of amendment request information and documents.

Table 9 Credit Amendment Request Information Submission

ID	User Story	Acceptance Criteria
US-AMD-03	As an Applicant, I want to update application details and upload supporting documents so that my amendment request can be processed.	• The system allows editing of relevant fields. • The system allows document upload. • Updated data is saved to the request.
US-AMD-04	As an Applicant, I want to submit my amendment request so that it can proceed for validation and review.	• Required updates are completed before submission. • Required documents are uploaded. • Request transitions to Submitted state.

5.2.4. Validation

This subsection describes user stories related to the validation of submitted amendment request data.

Table 10 Credit Amendment Request Validation

ID	User Story	Acceptance Criteria
US-AMD-05	As the System, I want to validate updated information and documents so that only valid amendments proceed.	• Mandatory updated fields are validated. • Supporting documents are verified. • File format and size are validated. • Valid requests proceed to Review.
US-AMD-06	As the System, I want to return invalid amendment requests so that corrections can be made.	• Invalid requests are returned. • Validation messages are displayed. • User can update and resubmit.

5.2.5. Review

This subsection describes user stories related to the review of submitted amendment request.

Table 11 Credit Amendment Request Review

ID	User Story	Acceptance Criteria
US-AMD-07	As a Reviewer, I want to review amendment requests so that I can verify the correctness and completeness of updates	• Reviewer can access amendment request. • Reviewer can view updated data and documents • Reviewer can proceed or return the request.

ID	User Story	Acceptance Criteria
US-AMD-08	As a Reviewer, I want to return amendment requests for correction so that incomplete updates can be addressed.	- Reviewer can return request with comments. - Request transitions to Returned state. - User can update and resubmit.

5.2.6. Routing

This subsection describes user stories related to the routing of amendment request for approval.

Table 12 Credit Amendment Request Routing

ID	User Story	Acceptance Criteria
US-AMD-09	As the System, I want to route amendment requests to appropriate approvers so that approval decisions can be made.	- Requests are routed based on configured rules. - Appropriate approvers are assigned. - Request transitions to Pending Approval.

5.2.7. Outcome

This subsection describes user stories related to approval decisions and outcomes of credit amendment requests.

Table 13 Credit Amendment Request Outcome

ID	User Story	Acceptance Criteria
US-AMD-10	As an Approver, I want to approve amendment requests so that valid changes are applied.	- Approver can approve request. - Changes are applied to the record. - Request transitions to Approved state.

ID	User Story	Acceptance Criteria
US-AMD-11	As an Approver, I want to reject amendment requests so that invalid changes are not applied.	• Approver can reject request. • No changes are applied. • Request transitions to Rejected state.
US-AMD-12	As an Approver, I want to return amendment requests for correction so that issues can be resolved before approval.	• Approver can return request with comments. • Request transitions to Returned state. • User can update and resubmit.

6. Credit Reinstatement User Stories

This section defines the user stories and acceptance criteria for the Credit Reinstatement workflow, describing how users and the system interact when reactivating previously suspended or inactive credit accounts.

6.1. Epic Overview

The Credit Reinstatement workflow enables controlled reactivation of inactive or suspended accounts, ensuring that reinstatement requests are validated, reviewed, and approved before the account is reactivated.

This epic includes:

- Initiation of reinstatement requests
- Eligibility validation for reinstatement
- Submission of supporting information and documents
- Validation of submitted data
- Review and approval of reinstatement requests
- Reactivation of approved accounts

6.2. User Stories and Acceptance Criteria

This subsection defines the user stories and acceptance criteria for the Credit Reinstatement workflow.

6.2.1. Credit Reinstatement Request Initiation

This subsection defines user stories for initiating a credit reinstatement request.

Table 14 Credit Reinstatement Request Initiation

ID	User Story	Acceptance Criteria
US-RST-01	As a Tenant User, I want to initiate a reinstatement request so that I can reactivate a suspended or inactive account.	• The system allows selection of an inactive or suspended account. • The system allows creation of a reinstatement request.

ID	User Story	Acceptance Criteria
		The request is created in Draft state.

6.2.2. Eligibility Validation

This subsection describes user stories related to eligibility validation for reinstatement requests.

ID	User Story	Acceptance Criteria
US-RST-02	As the System, I want to validate whether an account is eligible for reinstatement so that only valid accounts can be reactivated	- The system verifies account status. - Eligible accounts proceed to submission. - Ineligible requests are rejected.

6.2.3. Information Submission

This subsection describes user stories related to the submission of reinstatement request information and documents.

Table 15 Credit Reinstatement Request Information Submission

ID	User Story	Acceptance Criteria
US-RST-03	As an Applicant, I want to provide supporting documents and required information so that my reinstatement request can be processed.	- The system allows input of required information. - The system allows document upload. - Data is saved to the request.
US-RST-04	As an Applicant, I want to submit my reinstatement request so that it can proceed for validation and review.	- Required information is completed before submission. - Required documents are uploaded. - Request transitions to Submitted state.

6.2.4. Validation

This subsection describes user stories related to the validation of submitted reinstatement request data.

Table 16 Credit Reinstatement Request Validation

ID	User Story	Acceptance Criteria
US-RST-05	As the System, I want to validate submitted information and documents so that only valid reinstatement requests proceed.	- Mandatory fields are validated. - Supporting documents are verified. - File format and size are validated. - Valid requests proceed to Review stage.
US-RST-06	As the System, I want to return invalid reinstatement requests so that corrections can be made.	- Invalid requests are returned. - Validation messages are displayed. - User can update and resubmit.

6.2.5. Review

This subsection describes user stories related to the review of submitted reinstatement request.

Table 17 Credit Reinstatement Request Review

ID	User Story	Acceptance Criteria
US-RST-07	As a Reviewer, I want to review reinstatement requests so that I can assess eligibility and completeness.	- Reviewer can access request. - Reviewer can view supporting data and documents. - Reviewer can proceed or return the request.
US-RST-08	As a Reviewer, I want to return reinstatement requests for correction	Reviewer can return request with comments.

ID	User Story	Acceptance Criteria
	so that incomplete information can be addressed.	- Request transitions to Returned state. - User can update and resubmit.

6.2.6. Routing

This subsection describes user stories related to the routing of reinstatement request for approval.

Table 18 Credit Reinstatement Request Routing

ID	User Story	Acceptance Criteria
US-RST-09	As the System, I want to route reinstatement requests to appropriate approvers so that approval decisions can be made.	- Requests are routed based on configured workflow rules. - Appropriate approvers are assigned. - Request transitions to Pending Approval.

6.2.7. Outcome

This subsection describes user stories related to approval decisions and outcomes of reinstatement requests.

Table 19 Credit Reinstatement Request Outcome

ID	User Story	Acceptance Criteria
US-RST-10	As an Approver, I want to approve reinstatement requests so that eligible accounts are reactivated.	- Approver can approve request. - Account is reactivated. - Request transitions to Approved state.
US-RST-11	As an Approver, I want to reject reinstatement requests so that ineligible accounts remain inactive	- Approver can reject request. - Account remains inactive.

ID	User Story	Acceptance Criteria
		Request transitions to Rejected state.
US-RST-12	As an Approver, I want to return reinstatement requests for correction so that issues can be addressed before approval	- Approver can return request with comments. - Request transitions to Returned state. - User can update and resubmit.

7. Role-Based User Stories

This section presents user stories grouped by user roles to highlight how different users interact with the system and perform their respective responsibilities within the workflow.

7.1. Applicant User Stories

This subsection describes user stories from the perspective of the Applicant, focusing on initiating requests, providing information, and submitting applications:

- Initiates credit applications, amendment, and reinstatement requests
- Provides required information and uploads supporting documents
- Submits requests for processing
- Updates and resubmits returned requests

7.2. Tenant User Stories

This subsection describes user stories from the perspective of the Tenant User, focusing on facilitating request initiation on behalf of applicants:

- Initiates requests on behalf of applicants
- Inputs and manages applicant-related information
- Facilitates application and request creation

7.3. Reviewer User Stories

This subsection describes user stories from the perspective of the Reviewer, focusing on evaluating submitted requests and ensuring completeness:

- Accesses assigned requests for review
- Evaluates submitted information and supporting documents
- Returns requests for correction when necessary
- Advances requests to the next stage when requirements are met

7.4. Approver User Stories

This subsection describes user stories from the perspective of the Approver, focusing on decision-making within the workflow:

- Reviews requests pending approval

- Approves, rejects, or returns requests
- Provides decision remarks
- Finalizes workflow outcomes

US

8. Business Rule-Driven Acceptance Criteria

This section defines how business rules are reflected within acceptance criteria to ensure that system behavior aligns with defined validation, eligibility, routing, and approval logic.

8.1. Validation Rules

This subsection defines acceptance criteria reflect validation rules applied to ensure completeness and correctness of submitted data.

The following conditions define the validation rules applied to submitted data:

- Mandatory fields must be completed before submission.
- Required supporting documents must be uploaded.
- Uploaded documents must meet defined file format and size requirements.
- Data must comply with defined input constraints and formats.

8.2. Eligibility Rules

This subsection defines acceptance criteria related to eligibility rules that determine whether a request can proceed within the workflow.

The following outlines the key eligibility conditions applied to validate whether a request is allowed to proceed:

- Only eligible records can be amended.
- Only inactive or suspended accounts can be reinstated.
- Requests must satisfy predefined eligibility conditions before submission or processing
- Ineligible requests are rejected or prevented from proceeding.

Eligibility Conditions

Eligibility conditions define whether a request or account is allowed to proceed within the workflow based on system state, user permissions, and applicable business rules.

Note:

See the **Functional Design Document (FDD)** for **Amendment Eligibility** and **Reinstatement Eligibility** conditions.

8.3. Approval Rules

This subsection defines acceptance criteria related to approval rules that govern decision-making within the workflow.

The following outlines the key approval conditions applied during the decision-making process:

- Requests are evaluated based on defined approval criteria.
- Approval decisions must be recorded with corresponding user and timestamp.
- Only authorized approvers can perform approval actions.
- Requests may be approved, rejected, or returned for correction.

8.4. Routing Rules

This subsection defines acceptance criteria related to routing rules that determine how requests are assigned within the workflow.

The following outlines the key routing conditions applied to ensure proper assignment within the workflow:

- Requests are routed based on configured workflow definitions.
- Approvers are assigned based on roles, hierarchy, or predefined rules.
- Routing occurs automatically upon completion of preceding stages.
- Requests are directed to the appropriate next stage in the workflow.
-

9. Exception and Edge Case Scenarios

This section describes user stories and scenarios that address exceptions and edge cases encountered during workflow processing, including validation failures, returned requests, rejected outcomes, and system-level errors.

9.1. Validation Failures

This subsection describes scenarios where submitted data fails validation checks and requires user correction:

Key Scenarios

The following outlines key scenarios related to validation failures during request processing:

- Submission with incomplete mandatory fields
- Missing required supporting documents
- Invalid file format or file size
- Data not complying with defined input constraints

Expected System Behavior

The following describes how the system responds to validation failures:

- The system prevents submission or progression of the request.
- Validation error messages are displayed to the user.
- The request remains in **Draft** state or is returned to the user.
- The user is allowed to update and resubmit the request.

9.2. Returned Requests

This subsection describes scenarios where requests are returned by reviewers or approvers for correction.

Key Scenarios

The following outlines key scenarios related to returned requests:

- Reviewer identifies incomplete or incorrect information.
- Approver requires clarification or additional documentation.

Expected System Behavior

The following describes how the system handles returned requests:

- The request transitions to **Returned** state.
- Comments or remarks are captured and displayed to the user.
- The user is allowed to update and resubmit the request.
- The request re-enters the workflow upon resubmission.

9.3. Rejected Requests

This subsection describes scenarios where requests are rejected during the approval stage.

Key Scenarios

The following outlines key scenarios related to rejected requests:

- The request does not meet eligibility criteria.
- The request fails to satisfy approval conditions.

Expected System Behavior

The following describes how the system handles rejected requests:

- The request transitions to **Rejected** state.
- No further processing is allowed.
- The rejection decision is recorded.
- The user is notified of the outcome.

9.4. System Error Handling

This subsection describes scenarios involving unexpected system-level errors during processing.

Key Scenarios

The following outlines key scenarios related to system errors:

- System failure during validation or processing
- Failure in routing or workflow transition
- Errors in data processing or storage

Expected System Behavior

The following describes how the system responds to system errors:

- The system displays user-friendly error messages.
- The system logs errors for monitoring and investigation.
- The system prevents incomplete or inconsistent processing.
- The user may retry the action where applicable.
